Map of CHATRA District

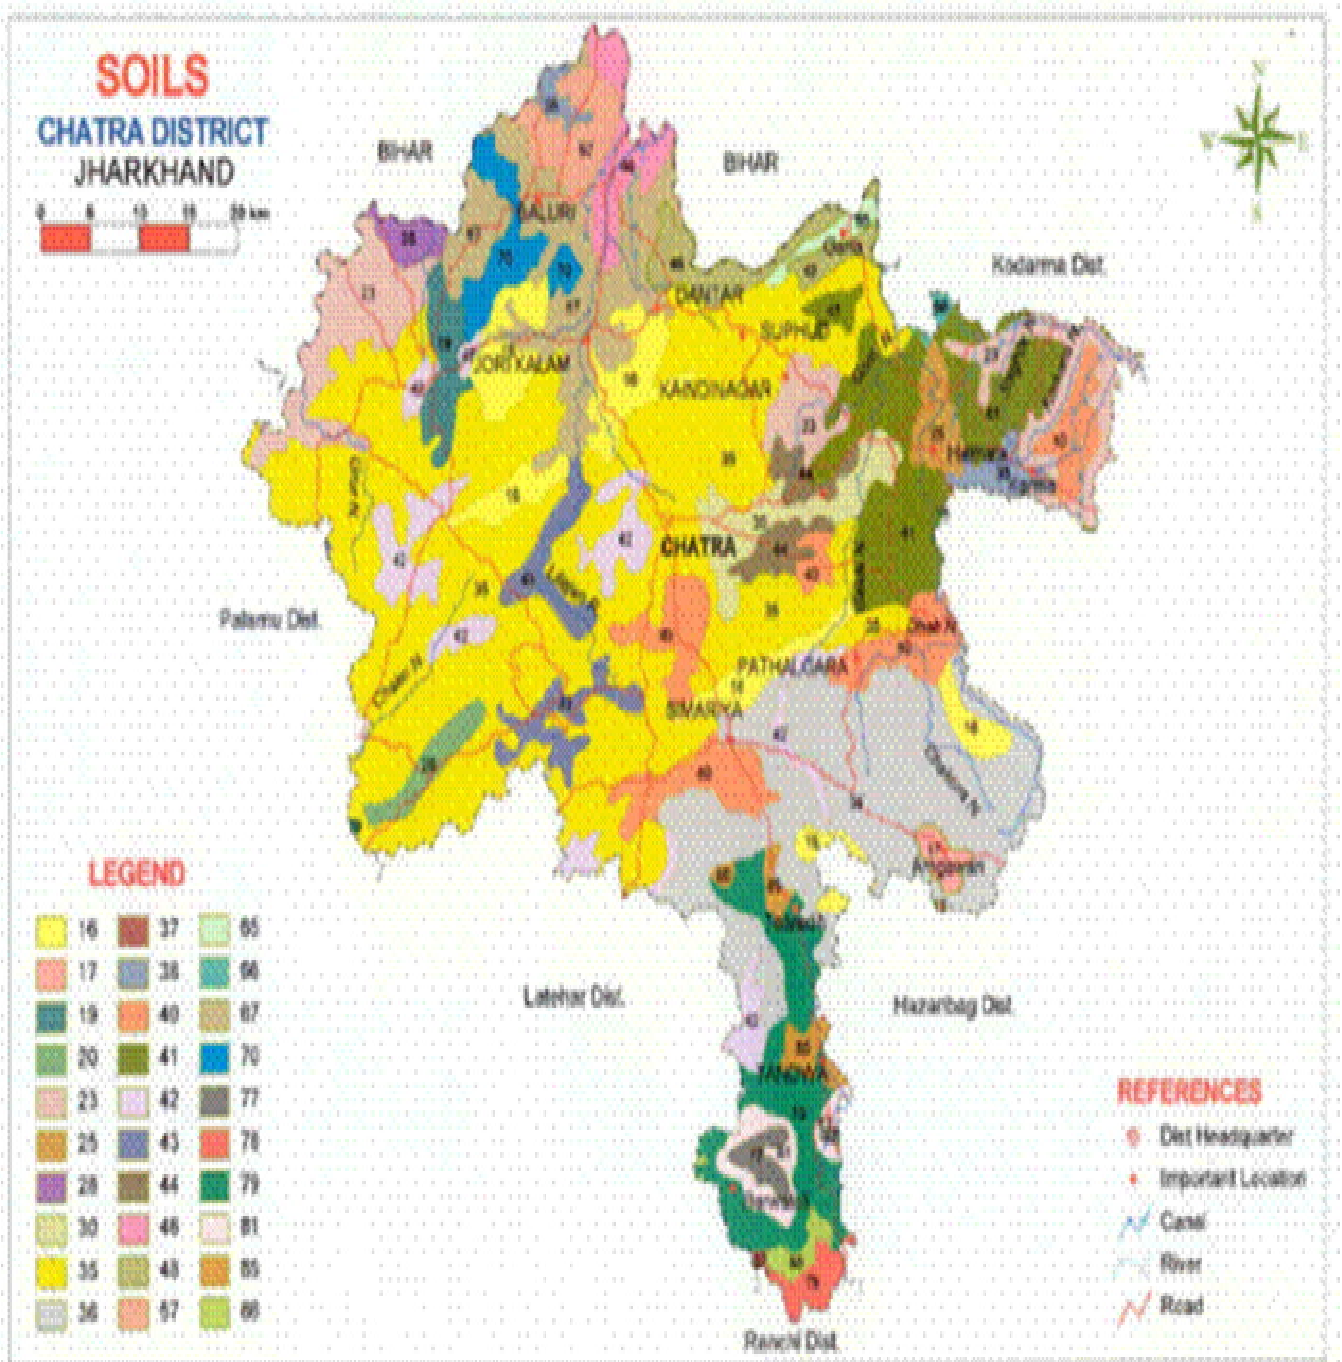

Fig - 1

ABOUT DISTRICT

The total geographical area of the Chatra district is about 3706.00 sq km and is the above of vast number of scheduled caste and tribal pollution. The people of the district are traditionally backward, poor and quite ignorant about technical know of modern agriculture technologies. The Entrepreneurship and scientific value orientation are very poorly developed in the people and they live on only subsistence farming and other agriculture based occupation. Rainfall is confined mostly to monsoon months of mid-June to mid October during rest of the year. The weather remains mostly dry except for some winter rains which are of uncertain nature. There is not such irrigation in the area. Only 5 per cent of cultivable land under some sort of irrigation. This percentage goes down to 5 percent during rabi season. This has made for a situation of mono cropping in most of the cultivation area up to 90 percent. The consumption of fertilizer is abnormally low in the district . In spite of the rich potentiality of the district to grow excellent horticultural crops of fruits, vegetables and ornamental plants. It is on account of lack of consciousness, inadequate availability of quality planting materials, weak post, harvest management and lack of essential infrastructural facilities in regard to marketing, storage, processing and packing etc. Availability of quality seed in time of crop and livestock continue to be a major constraint in rural development, non availability of quality input in time to farmers posses grant constraint affecting agricultural production and income to grant extent. The use of improved agricultural implements in the rural area is almost negligible. This is one of the reasons that agriculture continue to be backward in this region. Marketing of food grains, vegetables and village products in the grate's weakness in the rural development chain in this particular region. This cause exploitation of poor producers and consumers by middle men and Mahajans. Cattle population is very poor genetic stock. The cattle are short in status having neither high yielding capacity nor draft power. Production of Tassar and Lac has a great potential for increasing the income of farmers. But lack of market and awareness among farming community will be major constraint in its development. In the transfer of new scientific technology to the rural community, the major constraint is not technology rather is sociological. There has been weak linkage between research, extension education , credit system and development programme connected to the problems in villages. There are rich minerals belt and many related industries are developed substantially in this region , but their impact on the socio-economic condition of people comparison primary scheduled castes and scheduled tribes has been insignificant except for the limited employment.

SOCIO ECONOMIC FEATURES :

The total population of the district is 7,90,680 as per 2001 census. Out of the total population 4, 02,565 are male and 3,88,115 are female. The sex ratio is 509: 591.

AGRO CLIMATE INFORMATION :

The state of Jharkhand has been divided into three zones namely :

Zone (IV) Central & North Eastern Plateau Zone

Zone (V) – Western Plateau Zone

Zone (VI) South Eastern Plateau Zone

Chatra district come under Agro Climatic Zone IV

SOILS OF THE DISTRICT :-

Soil of this region are sedentary, which are developed from various rock system soils developed in the district are very old and due intensive leading over the years, soils are of poor fertility status .The soils are old with low base content, low CEC, acidic in reaction and low phosphate content the general characterization of upland, medium land and low land are given below.

Upland :

- Red, Brownish red in colour
- Light Texture
- Well drained
- Acidic Soil reaction
- Poor in Organic Carbon , N, C, Mg, P and S.

Medium Level

- Yellow, yellowish in colour
- Light to medium Textured
- Moderately Acidic
- Poor in A, Ca Mg and Organic Matter.

Low Land

- Grey or Grayish in colour
- Heavy Textured
- Natural to slightly alkaline soil reaction]
- Poor drained
- Medium in nitrogen and organic matter

Perfoma-1

Unit Specific Performance of Block demonstration of Accelerated Pulses Production Programme (A3P) during 2012-13

Name of District - CHATRA

Name of Block : Kanhachatti

1. Name of Crop : **Gram**
2. Total Area Unit : **1000 ha**
3. Total No of Farmers of Unit : **1966**
4. Name of Crop Variety under Minikit: **BG-372**
5. Name of other varieties planted in unit : **Pant Ji**
6. Details of adopted Technologies :
 - i) Line Showing
 - ii) Seed Treatment
 - iii) Micronutrient Implement
 - iv) Plant Protection bio product and IPM Kit
 - v) Soil abondment
7. Yield performance

	a) Minikit	b) Other planted varieties of crop
	Average yield 23.75q/ha	Average yield 16q/ha
	Lowest yield 18 q/ha	Lowest yield 13 q/ha
	Highest yield 26 q/ha	Highest yield 19q/ha
	Local average yield 16 q/ha	
	Increase over local 67%	
	Increase over state & National average%	
8. Economic performance :

	Cost of cultivation Rs 22000.00/ha
	Total Return Rs 64000.00/ha
	Net Return 42000.00/ha
9. Name of 5 highest yield performing farmer of the unit :
 - i) Ramsevak Gop, Madgada, kanhachatti- 8987564737
 - ii) Rameshwar yadav, Tulbul, Kanhachatti- 9470947013
 - iii) Satyanand Dubey, Bakchuma, Kanhachatti- 9430786993
 - iv) Renu Dangi, Charu, Kanhachatti - 9431748074
 - v) Binay Dangi, Rajpur, Kanhachatti - 8294748454
10. Farmers experience about the A3P block demonstration:
 - i) BG- 372 variety is suitable for local climate.
 - ii) Yield Increase After using of IPM/INM.
 - iii) Benefit through Soil abondment

Project Director,
ATMA Chatra
